

DeepWhite™ DMA-X

(Optical Brightening Agent For Detergent Powder/bar)

GENERAL INFORMATION:

Chemical composition	: Stilbene Disulfonic acid derivative
Molecular formula	: C ₄₀ H ₃₈ N ₁₂ O ₈ S ₂ Na ₂
Molecular weight	: 924
Physical Appearance	: Light Yellow to Off-White Free Flowing Granules
Chemical composition	: Disodium 4,4'-bis[(4-anilino-6-morpholino-1,3,5-triazin-2-yl) amino] stilbene-2,2'- disulphonate
Colour Index number	: C.I. Fluorescent Brightener 71
CAS Number	: 16090-02-1
Bulk density	: 400-500grams/Liter
Affinity	: High
Insoluble Substance	: 0.5% max
E-Value	: 423.0 – 449.0
pH of 0.5 % Sol at 60°C	: 10.0 – 11.0
Solubility (5 grams/Liter)At 98°C	: Clear to Slight Hazy Solution
Stability with alkaline peroxide	: Good
Stability with Hydrosulphite	: Good
Stability with Alkali	: Good
Stability with Hard water	: Good

PARTICLE SIZE DISTRIBUTION

Property	>	>	UMO	Min%	Max%	Method
Range 1	500		µm		10	DHQA 061
Range 2		125	µm		50	DHQA 061

APPLICATION:

- DeepWhite DMA-X can be used in all type of detergents (laundry detergent powder).
- It can be used in production of powder detergents by all usual process e.g. Pressure jet spraying, spray mixing & dry mixing.
- DeepWhite DMA-X optical brighteners absorb UV and emit blue light to compensate the inherent yellow cast of textile substrates and produce brilliant neutral whites.
- DeepWhite DMA-X is stable to alkali, perborate, peroxide & TAED under conditions usually found in household & commercial laundering. When already present on the fiber, DMA-X has good fastness to chlorine bleaching.
- Only small reduction in brightness occurs when bleaching is carried out in a solution of hypochlorite containing up to 500 ppm available chlorine.
- DeepWhite DMA-X is cost effective optical brightener under above conditions
- Recommended dosage - 0.15% - 0.60%
